### DMX512 Address Set up

### \*The default address for KVX DMX driver is 001.

### \*Address set up device:

EasyNFC app

### \*Address Set up:

①RDM address set up:

Set up the address with RDM device. For detailed operation, please refer to your RDM device instruction manual.

### ②NFC address set up:

The DMX address of each KVX driver can be read and written by mobile phones with NFC function via Android or iOS ProNFC app (can be found in <u>Google Play</u> and <u>iOS App Store</u>; apk download: <u>ProNFC.apk</u>; <u>ProNFC set up video</u>), or NFC handheld device (NFC read & write device: NFC-RW) by placing it close to the NFC sensor of the DMX512 KVX driver.

### **Output Voltage Adjustment**

### \*Fine-tuning output voltage for DMX512 driver.

①The output voltage of each KVX driver can be slightly adjusted by mobile phones with NFC function via Android or iOS ProNFC app (can be found in <u>Google Play</u> and <u>iOS App Store</u>; apk download: <u>ProNFC.apk</u>; <u>ProNFC set up video</u>), or NFC handheld device (NFC read & write device: NFC-RW) by placing it close to the NFC sensor of the DMX512 KVX driver.

<sup>(2)</sup>Adjustable voltage range is distributed into level 1~10, adding 1 level will increase 0.2V. The default output voltage level of KVX driver is 5. If the driver is 24V, you can adjust the output voltage within 24V to 26V freely.
